Hospital Report 4Q2011 Legend

1. Report subtitle: This subtitle indicates which four quarters of data are included as columns of the report. Because the first four reports all have the same four quarters included, the subtitle will be the same. Future reports that have different quarters of data displayed will also have different subtitles – it will only be the same for these first four quarters.
2. This is the most current quarter of data for this report. The patients/cases included in the denominator are Medicare Part A inpatients.
3. N/A indicates to you that the hospital did not report any data for this particular measure. (And may tell you they had zero eligible cases that quarter.)
4. N/A indicates that these are future quarters; there is no data to be included in these columns at this time.
5. This column is the same data that will be found in the state report, and includes the average performance for CAHs participating in MBQIP. CAHs can begin to gauge how their performance looks compared to the state average performance.
6. This column tells you the national average of CAHs participating in MBQIP for the current quarter. CAHs can begin to gauge how their performance looks compared to national average performance.

Hospital Report, 1Q2012

PN-5c 6	Initial Antibiotic Received Within 6 Hours Of Hospital Arrival	100% of 7 patients	N/A	N/A	N/A	100% of 7 patients	N/A	N/A
PN-6	Initial Antibiotic Selection for Community-Acquired Pneumonia (CAP) in Immunocompetent Patients	100% of 1 patients	83.33% of 6 patients	N/A	N/A	85.71% of 7 patients	83.09%	88.19%
PN-7 6	Influenza Vaccination	100% of 13 patients	N/A	N/A	N/A	100% of 13 patients	N/A	N/A

Hospital Report 1Q2012 Legend

1. This is the current quarter of data; again, the denominator is Medicare Part A inpatients.
2. This column tells the aggregate rate for the CAH for the available quarters of data that are on the report. (Make sure that you do not compare the CAH current quarter performance to the CAH aggregate rate.)
3. This is the state average for the current quarter of data (1Q2012 for this report sample).
4. This is the national average for the current quarter (again, 1Q2012).
5. You will notice that the report subtitle is the same as the previous quarter. This is because the same four quarters of data (columns) are represented on this report.
6. These are the measures that were retired by CMS as of January 1, 2012. N/A now appears in these cells for hospital, state, and national performance, because there is no data to be reported for these measures.

Hospital Report 2Q2012 Legend

1. This is the current quarter of data. The two previous quarters are still represented on the report.
2. The aggregate rate now tells the CAH performance rolled-up over the three available quarters of data.
3. This state average is for the current quarter of data (2Q2012).
4. This national average is for the current quarter of data (2Q2012).

State Report 2Q2012 Legend

1. This is the data for your state. Data for all CAHs in your state participating in MBQIP *that submitted data for the quarter* are included.
2. This is the aggregate rate of performance over the three quarters of data that have been submitted thus far.
3. Keep in mind that some measures were retired after 4Q2011, so N/A appears throughout the report for hospital, state, and national performance.

You can begin to see with the roll-up of state data, the numbers don't seem so small. There are 44 states submitting data that is getting aggregated up nationally for MBQIP so far, which adds up to a lot of patients nationwide.
