Hospital Quality Improvement Initiative Program

| SCORING CRITERIA | | |
|---|---|--|
| Significance: How significant is the problem that is being addressed? | | |
| Advanced (3) | Intermediate (2) | Basic (1) |
| <ul style="list-style-type: none"> Timely issue identified Addresses a critical need Describes potential impact to patient outcomes | <ul style="list-style-type: none"> Timely issue identified Addresses a critical need | <ul style="list-style-type: none"> Issue Identified |
| Data Driven: Does the proposal provide data and evidentiary support for the identified problem? | | |
| Advanced (3) | Intermediate (2) | Basic (1) |
| <ul style="list-style-type: none"> Data provided to support the need or details how data will be collected Provides improvement measures that will be tracked | <ul style="list-style-type: none"> Some supporting data provided Briefly discusses measures | <ul style="list-style-type: none"> Minimal data discussion |
| Improvement Plan: Does the proposal utilize the model of improvement in its design? Does the proposal detail action steps and the interventions that will be executed? Is there a detailed timeline with major milestones? | | |
| Advanced (3) | Intermediate (2) | Basic (1) |
| <ul style="list-style-type: none"> Describes the potential PDSA cycles to be used for the proposal Describes timeline and milestones Details action steps and improvement interventions to be executed | <ul style="list-style-type: none"> Describes timeline and potential milestones Details action steps or interventions to be executed | <ul style="list-style-type: none"> Briefly describes timeline, but does not detail action steps for the project |
| Evaluation: How does the proposal describe evaluating the project's success? Were goals and objectives provided? Are output, process, and outcome measures identified? | | |
| Advanced (3) | Intermediate (2) | Basic (1) |
| <ul style="list-style-type: none"> Describes a thorough evaluation plan Specifically discusses output, process, and outcome measures | <ul style="list-style-type: none"> Briefly discusses evaluation Provides some evaluation measures | <ul style="list-style-type: none"> Briefly discusses evaluation plan Provides no measures |
| Applicable to Flex Priorities: YES OR NO | | |
| Does the project match the priorities of the Flex program as set forth by the Health Resources and Services Administration (HRSA) and the Federal Office of Rural Health Policy (FORHP)? | | |
| <ul style="list-style-type: none"> Creates or sustains an improvement program that identifies or addresses a specific quality improvement need Utilizes quality metrics and data to measure impact and change due to the intervention Directly or indirectly improves patient outcomes | | |

- We award between 5 and 10 proposals each year
- Awards range from \$2,500 to \$8,000
- We look for data driven proposals, but assist hospitals in gathering data if inspired ideas fall short
- A key requirement is using evaluation metrics or identifying appropriate measures through the project work
- Encourage the use of the model of improvement and PDSA cycles

Flu Vaccination Improvement Initiative

IMM-2

- ⇒ 2018 to 2020
- ⇒ Used the Toyota Production System Method
- ⇒ Improved documentation and checkpoints to ensure no patients were missed
- ⇒ Goal of 90%

HCP

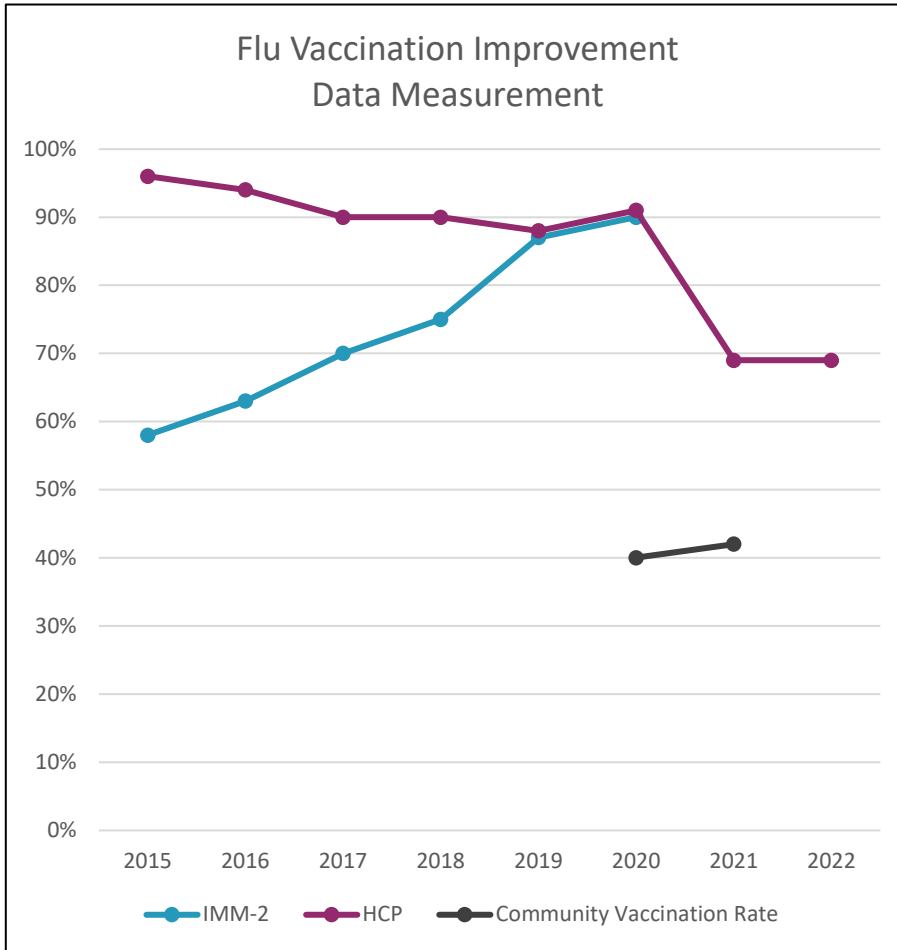

- ⇒ 2019 to 2023
- ⇒ Meet employees where they are at
- ⇒ Incentives
- ⇒ Goal of 95%

Community

- ⇒ 2021 to 2023
- ⇒ Flu vaccinations for underserved populations
- ⇒ Pop-up vaccine events at locations that meet the population where they are at
- ⇒ Goal of 70%

Flu Vaccination Measurement Change

IMM-2 →

- Although retired, the hospital continued to collect data and continued to improve
- This work fed into their community improvement project

HCP →

- Data began to improve
- COVID and mask wearing depleted all momentum and decreased the rate significantly

COMMUNITY VACCINATION →

- Data collection still ongoing
- Small improvement seen so far

Challenges and Lessons Learned

- Unexpected events cause priorities to shift and require pivoting
- Make it as easy as possible for participants
- Provide education in many different languages, medias, messages, and methods
- Partner, partner, partner, and partner some more
- Not all program elements will be successful, but they can provide valuable information on how to pivot or adjust actions
- A good assessment is the foundation for a strong QI project

Fall Prevention

➔ Significance

Alarming increase in the patient fall rate sparked concern for assessment and improvement

Data showed a need for improved communication

➔ Elements

Communication white boards

Bedside huddles

Patient and family engagement training

Weekly fall prevention rounds

➔ Results

Positive feedback and participation from staff

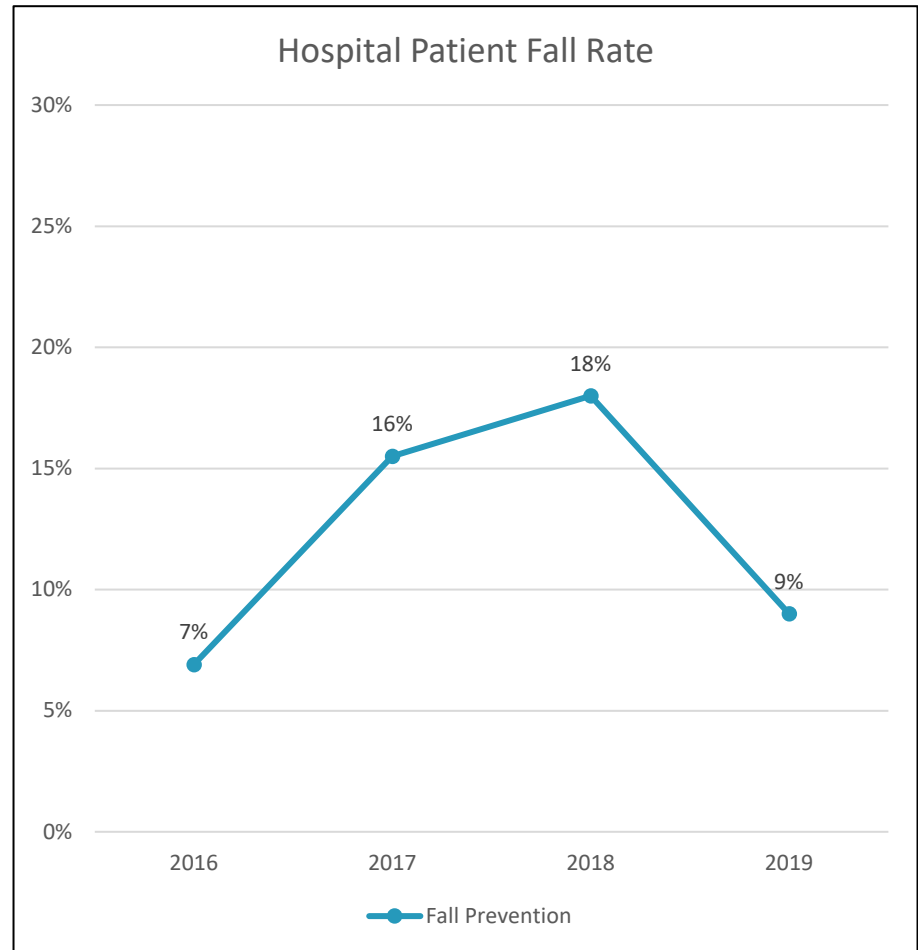

Communication between staff and departments has improved

Rate declined

Fall Prevention Measurement Change

Hospital Fall Rate →

- Dramatic increase in fall rate from 2016 to 2018
- Project elements resulted in a significant decrease in falls
- Multiple staff changes since first implementation
- Some project elements are still in place

HCAHPS Improvement – Noise Reduction

➔ Significance

Q9 was the lowest performance on the HCAHPS survey

Larger hospital system made noise reduction a priority for their entire medical footprint

Goal was to reach 78.2% (75th percentile)

➔ Elements

Decibel indicators installed in rooms, nursing stations, and common areas

Visual cues

Staff noise reduction huddles

Continued awareness

➔ Results

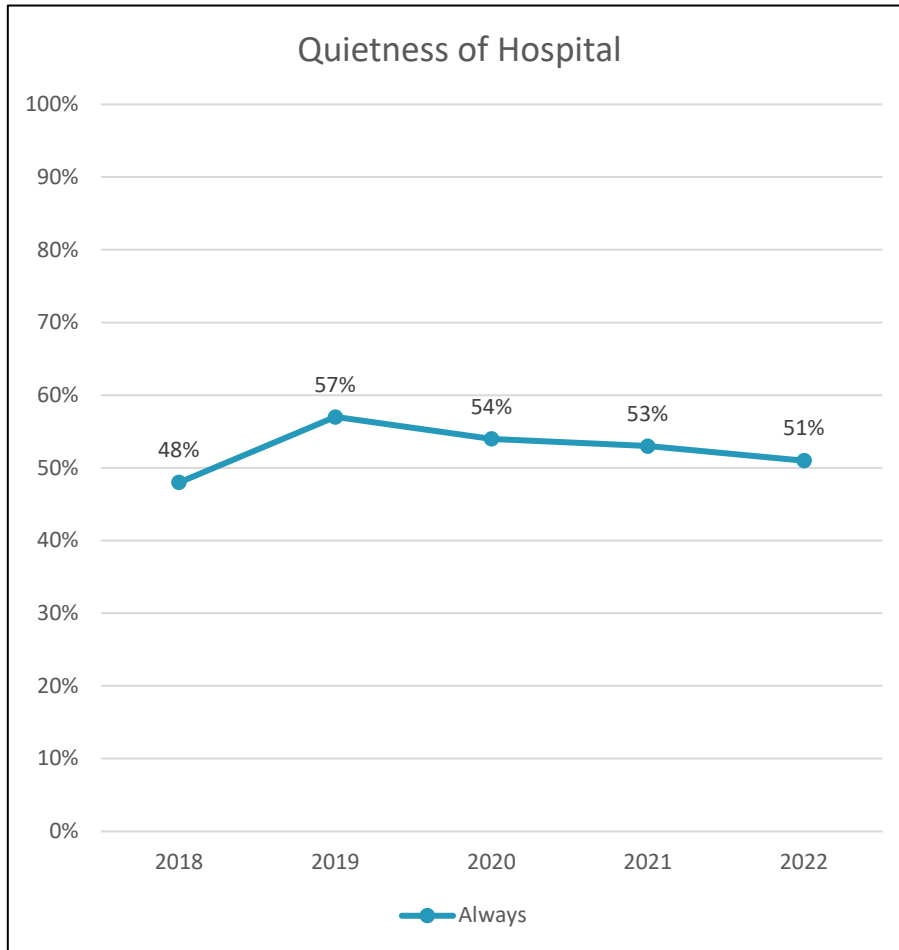

Positive feedback and participation from staff

Self-awareness increased

Patient experience improved

Quietness of Hospital Measurement Change

HCAHPS Q9 Quietness of Hospital →

- Significant improvement post project implementation
- Staff turnover fizzled momentum
- Quality continues to decline
- Due to high overall HCAHPS rating, specific focus on this element is minimal

Best practice to share

Initiatives lose impact longevity without a continued champion or permanent place in organizational culture and policies

Additional Ongoing Projects

| Project | Measurement |
|---|---|
| Stroke treatment response times | Door to CT times Resulting patient outcomes |
| Antibiotic Stewardship | Prescribing rates for specific conditions |
| Improve AMI outcomes | ECG times in the ED (formerly OP-5) |
| Improve patient treatment adherence | Referral completion rates MIPS overall interoperability Patient adherence to specific treatment plans |
| Improving self-care outcomes in ostomy and wound patients | ICD10 codes for ostomy and wound complications |
| Postpartum hemorrhage carts and education | Labor and delivery complication metrics |
| Additional fall prevention programs | Patient fall rate |

Improvements to this QI Program

- Assisting hospitals with finding new champions after staff turnover
- Educational opportunities for creating outcome measures and other evaluation methods
- Encouraging regular assessment as well as providing tools for identifying needs
- Highlight hospital initiatives with all the CAHs for replication and scalability
- Continue to guide hospitals through drafting project proposals, identifying data, and promoting long term impact
