POPULATION HEALTH TOOLKIT

Are You Looking for Data to Support an Idea or Story for Your Rural Community?

In cooperation with the Federal Office of Rural Health Policy, the Population Health Toolkit provides visualizations of data from multiple sources that answer questions that rural hospitals and communities have about the health of their communities. Explore your data further by downloading the information to create your own analysis and graphs.

Complete the [Critical Access Hospital Population Health Readiness Assessment](#) to connect with tools and resources targeted towards rural health organizations' unique strengths and needs for transitioning towards population health. The toolkit is continually updated with new resources to help your facility or county navigate the journey towards improved population health along each milestone.

Compare Metrics From 15 Scenarios

The 15 scenarios listed below have been updated with new data and now include benchmarks for hospital or county-level users to compare their metrics to state and national benchmarks. All scenarios include explanations, visualizations, and instructional videos on how to use and export the data. Be sure to view the videos on how to analyze claims data.

- ⇒ Cancer Demographics
- ⇒ COPD Demographics
- ⇒ Diabetes Demographics
- ⇒ Discharge Instructions
- ⇒ Emergency Department Access
- ⇒ Injury Demographics
- ⇒ Patient Satisfaction
- ⇒ Poverty, Preventable Stays, and Mental Health Shortage
- ⇒ Social Determinants of Health
- ⇒ Socioeconomic Status and Well-being
- ⇒ Stroke Demographics
- ⇒ Transportation and Health Status
- ⇒ Understanding of Care and County Race Demographics
- ⇒ Uninsured Rates, Behavior, and Mental Health
- ⇒ Using Claims Data
